

Campus Events & Clubs

Hein Htut Aung — Backend API and Database

Summary

PRD data model is sound but lacks implementation details: API schemas, indexing strategy, timezone handling, token verification, error formats, and activity update policies.

All Findings

ID	PRD section	Issue or question	Why it matters	Severity	Recommended change
BE-01	API/11	No request/response schemas	Inconsistent implementation	High	Create OpenAPI spec
BE-02	Data/8	Role field lacks enum	Auth unpredictability	High	Enforce STUDENT/ORGANIZER
BE-03	Arch/9	Timezone conversion unclear	Wrong event times	High	Specify UTC + conversion
BE-04	Data/8	No cascade/soft-delete rules	Data orphaning	Medium	Define deletion strategy
BE-05	API/11	Error format not standardized	Inconsistent handling	Medium	Provide JSON schema
BE-06	Data/8	Incomplete indexing	Query slowdown	Medium	Add foreign key indexes
BE-07	Rules/7	No past-date validation	Invalid events	Medium	Validate date $\geq$ now
BE-08	Rules/7	Updates after registration undefined	Registration validity	Medium	Lock PUBLISHED or audit?
BE-09	Stack/10	No backup/recovery policy	Data loss risk	Low	Document retention

Decision Requests For The Group

1. **API Specification** — OpenAPI with schemas, validation, error codes
2. **Indexing** — Document all indexes in migration scripts
3. **Timezone** — Agree on campus TZ (e.g., UTC+7); always store UTC
4. **Error Format** — Standardized JSON: `{code, message, fields}`
5. **Activity Update Policy** — Can organizers modify date_time/location after registration? If yes: notify students + audit log? If no: lock PUBLISHED activities
