CE

A smarter campus experience

Events • Clubs • Community

02

People & roles

S STUDENT

- Discover events
- Register & get QR ticket
- Check in and learn

O ORGANIZER

- Create & publish activities
- Manage roster
- Request facilities support

A ADMIN

- Review Organizer requests
- Approve or reject access
- Read-only oversight

Shared principle

The server decides access.

Users cannot choose their own role.

Stakeholders

Students • Clubs Administration • Library Facilities • Internships

03

Local AI inside the project

AI ASSISTS — PEOPLE DECIDE

MODEL

google/gemini-2.5-flash

Server-side AI/ML API connection.

Fallback

A deterministic template keeps planning usable when AI is unavailable.

What the AI helps with

01

Event Planning

Title, description, timed agenda and checklist

02

Organizer Review

Evidence-based assessment of access requests

03

Library Relevance

Checks whether an activity has a learning purpose

Human review is required before applying or publishing.

04

Connected APIs & services

OUR ECOSYSTEM

Firebase Auth

- Google sign-in
- Server identity checks

Cloud Firestore

- Stores users and activities
- Registrations and tickets

AI/ML API

- Gemini 2.5 Flash
- Planning and AI reviews

Team 10 Facilities

- Creates work orders
- Receives status updates

Team 17 Internships

- Read-only listings
- Search and external links

Campus Library

- Book catalog search
- Learning resources

Notification Hub

- Campus event updates
- Notification integration

Campus Events & Clubs connects campus services through the backend.

05

Technology stack

HOW THE PLATFORM IS BUILT

Core technologies

Frontend

React • TypeScript • Vite

Backend

Node.js • Express

Data & identity

Firebase Authentication • Cloud Firestore

Testing

Firebase Emulator • Playwright

React-based frontend • Persistent Express API • Firebase-backed data
